

Fig. S1

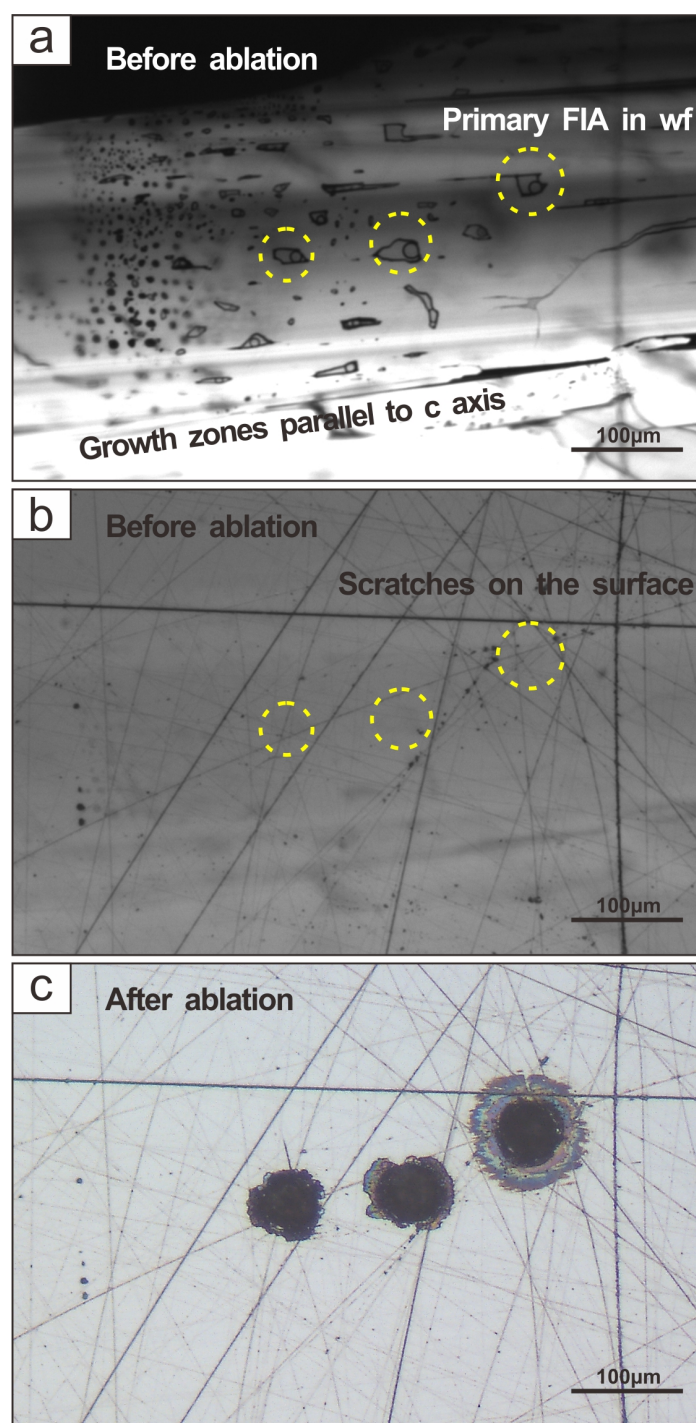

Fig. S1. Ablation of primary FIA along wolframite growth zones. Section cut parallel to (010) face of the main wolframite crystal. A transmitted light image (a) and a reflected light image (b) were taken together to delineate the surface projection map of fluid inclusions using scratches as reference. The fluid inclusions can then be relocated and ablated precisely (c) according to the map. Abbreviations: wf = wolframite.
