

Table 2. Electron microprobe analyses showing the average chemical composition of each sample as oxide weight ratios, chemical formula units (apfu) calculated on the basis of 2.0 cations, and molar endmember ratios; the relative measurement error for WO_3 is 0.15 wt%; that of FeO, MnO and MgO 0.3 wt%, 0.2 wt% and 0.02 wt%, respectively. Nb_2O_5 and Ta_2O_5 show a standard error of 0.1 and 0.07 wt%, respectively. Other measured oxides (SiO_2 , TiO_2 , ZnO, CaO, MoO_3 , NiO, PbO) were constantly present in amounts well below the detection limit of the instrument and are not shown.
