

THE AMERICAN MINERALOGIST, VOL. 56, JULY-AUGUST, 1971

PYRITE OF UNUSUAL HABIT SIMULATING TWINNING FROM THE  
GREEN RIVER FORMATION OF WYOMING: CORRECTION

A. PABST, *Department of Geology and Geophysics, University  
of California, Berkeley, California 94720*

In a recent description of pyrite of unusual habit (Pabst, 1971, p. 143) reference was made to "twinned pseudomorphs after pyrite" from Greene County, Missouri, described by Ellis (1947). It was stated that Ellis "reported no substantiating observations". At that point the later work on the Greene County material by Hood (1962), who made further significant observations, should have been mentioned. Hood concluded that this material should be ". . . Described as goethite pseudomorph after twinned oriented overgrowths of marcasite on pyrite. . .".

On page 137, first line of last paragraph, 1.50 should read 1/50.
