

## Memorial of Takeo Watanabe June 23, 1907–December 18, 1986

AKIRA KATO

Department of Geology, National Science Museum 3-23-1 Hyakunin-cho, Shinjuku, Tokyo 160, Japan

Takeo Watanabe, life fellow of the Mineralogical Society of America, Professor Emeritus at the University of Tokyo, passed away on December 18, 1986, of a sudden heart attack at his home, 3-30-4, Higashi-Oizumi, Nerima, Tokyo.

He was born in Tokyo on June 23, 1907, as the first son of Hisashi and Taka Watanabe. After his entrance to the Geological Institute, Imperial University of Tokyo, his lifetime was entirely devoted to research and educational works in the fields of economic geology and mineralogy. He graduated in 1931, submitting a thesis titled "Geology and ore deposits of the Suan Mining District," and was soon appointed the assistant in the Department of Geology and Mineralogy, Hokkaido Imperial University. From 1936, he stayed at the Mineralogical Institute in Berlin under the professorship of Dr. Paul Ramdohr, where he began to study an unknown mineral from Hol Kol, one of the ore deposits in Suan, North Korea. With the aid of Dr. Hugo Strunz, the study was successfully concluded in 1939 by the description of a new mineral, kotoite ( $Mg_3(BO_3)_2$ ). From this discovery he could elucidate the genesis of this mineral as the product of boron metasomatism of partially dissociated dolomite after thermal metamorphism due to granitic intrusion. This was also the framework of his doctor thesis in 1943, leading to the prediction of the occurrence of kotoite in similar dolomite-granite contacts to Hol Kol and, furthermore, of that of another new mineral, the Mn analogue of kotoite, in rhodochrosite-granite contacts. Nature did provide him responses immediately within his fatherland to validate his predictions. In 1955 kotoite was found in a dolomite-granite contact in Iwaté Prefecture, Japan, by him; in 1963, the Mn analogue of kotoite, later named jimboite, was described by this marvelous prophet himself. Still we, including him, believe that these are blessings from Heaven to those who devote themselves to natural sciences with the faith of eternal approach to Nature. And, these works were a threshold before the most glorious time in his scientific career. In 1966, the Prize of the Japan Academy was conferred on him to reward his contributions to mineralogy and economic geology.

The period of his post as professor in Geological Institute, University of Tokyo, was from 1944 to 1968. During this time he had many important side posts in and out of university, including Dean of Faculty of Science, University of Tokyo, Councilor of the International Mineralogical Association, President of the Society of Mining Geologists of Japan, President of the Geological Society

of Japan, and President of the Mineralogical Society of Japan. After retirement from the University of Tokyo, he was appointed professor of the Department of Earth Sciences, Nagoya University, until 1971. His educational career was terminated after his highest post, President of Akita University from 1971 to 1976.

His energetic field, laboratory, and office works were supported by his physical toughness, cultivated as a soccer player and alpinist when he was a high school and university student. At the time of a field trip passing through a part of the Sahara desert during the 19th International Geological Congress, all the participants except him needed medical help from the accompanying nurse, who called him one of the most sound geologists ever seen.

He was also a distinguished photographer. All the photomicrographs attached to his papers he took himself. He used to tell us that this talent was greatly promoted at Berlin.

On his final day, a copy of a journal was placed at his bedside. It was *Fortschritte der Mineralogie*, Band 63, Heft 2 (1985). He must have been following the memorial of Dr. Paul Ramdohr therein just before the tragedy. Perhaps, two great scientists are now meeting together at a certain place far beyond our reach.

### ACKNOWLEDGMENTS

For the preparation of this memorial and the selected bibliography of Takeo Watanabe, I am indebted to Professor T. Tatsumi, Dr. H. Shimazaki, and Dr. M. Shimizu.

### SELECTED BIBLIOGRAPHY OF TAKEO WATANABE<sup>1</sup>

- Crystals of native tellurium from the Takinosawa vein, Teine mine, Hokkaido, *Jour. Japanese Assoc. Miner. Petro. Econ. Geol.*, 16, 24–27 (1936) (in Japanese).
- Kotoite, ein neues gesteinsbildendes Magnesiumborat. *Miner. Petro. Mitt.*, 50, 441–463 (1939).
- Eruptions of molten sulphur from the Siretoko-Iosan. *Japanese Jour. Geol. Geogr.*, 17, 289–310 (1940).
- Geology and mineralization of the Suan District, Tyosen (Korea). *Jour. Fac. Sci. Hokkaido Imper. Univ.*, Ser. 4, 6, 207–303 (1943).
- (with Y. Takéuchi and T. Ito) The crystal structures of warwickite, ludwigite and pinakolite. *Acta Cryst.*, 3, 98–107 (1950).
- Suanite, a new magnesium borate mineral from Hol Kol, Suan, North Korea. *Miner. Jour.*, 1, 54–62 (1954).
- (with M. Yamasaki, G. Kojima, S. Nagaoka, and K. Hirayama) Geological study of damages caused by atomic bombs in Hiroshima and Nagasaki. *Japanese Jour. Geol. Geogr.*, 24, 161–170 (1954).
- (with J. Ito) Paigeite from the Kamaishi iron mine, Iwate Prefecture. *Miner. Jour.*, 1, 84–88 (1954).
- (with H. Mukaiyama) Structural localization of high-grade sulphur ores at the Zao mine, Yamagata Prefecture, Japan. *Mining Geol.*, 4, 147–157 (1954) (in Japanese).
- Genesis of bedded manganese deposits and cupriferous pyrite deposits in Japan. *Mining Geol.*, 7, 87–97 (1957) (in Japanese).
- On the occurrence and paragenesis of magnesium borate minerals in dolomite contact skarns. *Jour. Miner. Soc. Japan*, 3, 747–767 (1958) (in Japanese).
- The minerals of the Noda-Tamagawa mine, Iwaté Prefecture, Japan. I. Notes on geology and parageneses of minerals. *Miner. Jour.*, 2, 408–421 (1959).
- (with A. Kato and J. Ito) The minerals of the Noda-Tamagawa mine, Iwaté Prefecture, Japan. II. Pyrochroite ore (Kimiman-ko) and its origin. *Miner. Jour.*, 3, 30–41 (1960).
- (with A. Kato and J. Ito) Manganpyrosomalite from the Kyurazawa mine, Tochigi Prefecture. *Miner. Jour.*, 3, 130–138 (1961).
- (with Y. Takéuchi and J. Ito) The minerals of the Noda-Tamagawa mine, Iwaté Prefecture, Japan. III. Yoshimuraite, a new barium-titanium-manganese silicate mineral. *Miner. Jour.*, 3, 156–167 (1961).
- (with A. Kato and T. Katsura) Kotoite,  $Mg_3(BO_3)_2$ , from the Neichi mine, Iwaté Prefecture. *Proc. Japan Academy*, 39, 164–169 (1963).
- (with A. Kato, T. Matsumoto, and J. Ito) Jimboite,  $Mn_3(BO_3)_2$ , a new mineral from the Maso mine, Tochigi Prefecture. *Proc. Japan Academy*, 39, 170–175 (1963).
- (with S. Iwao, T. Tatsumi, and K. Kanehira) Folded ore bodies of the Okuki mine. In *Volcanism and ore genesis* (edited by T. Tatsumi). Univ. of Tokyo Press, 105–117 (1970).
- (with S. Yui and A. Kato) Bedded manganese deposits in Japan: A review. In *Volcanism and ore genesis* (edited by T. Tatsumi). Univ. of Tokyo Press, 119–142 (1970).
- (with S. Yui) Metamorphosed bedded manganese ore deposits of the Noda-Tamagawa mine. In *Volcanism and ore genesis* (edited by T. Tatsumi). Univ. of Tokyo Press, 143–152 (1970).
- (with T. Tatsumi) Geological environment of formation of the Kuroko-type deposits. *Mining Geology, Special Issue*, 3 (Proc. IMA-IAGOD, 1970, IAGOD Vol.), 216–220 (1971).
- Several problems on geochemistry of the Kuroko deposits. *Spec. Publ. Symposium at Akita on Geochemistry of the Kuroko deposits. Geochem. Soc. Japan*, 1–86 (1973) (in Japanese).
- (with M. Yoshii, K. Maeda, T. Kato, S. Yui, and A. Kato) Kinoshitalite, a new mineral from the Noda-Tamagawa mine, Iwaté Prefecture. *Chigaku Kenkyu (Geoscience Magazine)*, 24, 181–188 (1973) (in Japanese).
- (with A. Kato, M. Nambu, K. Tanida, and T. Kitamura) Mineralogical study of manganese silicate ores in northeastern Japan (XIX). Serandite from Tanohata mine, Iwaté Prefecture. *Bull. Res. Inst. Miner. Dress. Metallurg. Tohoku Univ.*, 32, 1–13 (1976) (in Japanese).
- (with A. Kato, J. Ito, T. Yoshimura, H. Momoi, and K. Fukuda) Hara-daité,  $Sr_2V_2^{4+}[O_2|Si_4O_{12}]$ , from the Noda-Tamagawa mine, Iwaté Prefecture, and the Yamato mine, Kagoshima Prefecture. *Proc. Japan Acad.*, B-58, 21–24 (1982).
- (with A. Kato and S. Matsubara) Banalsite from the Shiromaru mine, Tokyo. *Bull. Natn. Sci. Museum, Ser. C*, 13 (1987) (in press).

<sup>1</sup> A copy of the complete bibliography of Takeo Watanabe may be ordered as Document AM-87-365 from the Business Office, Mineralogical Society of America, 1625 I Street, N.W., Suite 414, Washington, D.C. 20006, U.S.A. Please remit \$5.00 in advance for the microfiche.
