## Appendix

This appendix provides the definition of selected structural parameters mentioned in the body of the text.

## Tetrahedral Rotation angle, $\alpha$.

Tetrahedral rotation angle $(\alpha)$ was defined according to the following formula:
$\alpha=\frac{\sum_{i}^{6}\left|120-\varphi_{i}\right|}{12}$
Where $\varphi_{i}$ is a generic internal angle of the hexagon defined by basal O atoms.

## Variance of A- $\mathrm{O}_{\text {basal }}$ distances, $\boldsymbol{\sigma} \mathbf{A}-\mathrm{O}_{\text {basal }}$

This parameter is a measure of the distortion of interlayer coordination and can be computed from:
óA $-\mathrm{O}_{\text {basal }}=\sqrt{\frac{\sum_{i}\left(\mathrm{~A}-\mathrm{O}_{\text {basal, } \mathrm{i}}-\left\langle\mathrm{A}-\mathrm{O}_{\text {basal }}\right\rangle\right)^{2}}{\mathrm{n}}}$
where $\mathrm{A}-\mathrm{O}_{\text {basal, }, \mathrm{i}}$ is an individual interlayer cation (A)-basal O atom distance; ( $\mathrm{O}_{\text {basal, }, \mathrm{i}}$ )(A$\mathrm{O}_{\text {basal }}$ ) is the mean interlayer cation-basal O distance; n is the number of individual interlayer cation-basal O atom distances (e.g., 12).

Mean interlayer cation (A)-tetrahedral cation (T) distances, projected on (001) plane, (A-T) ${ }_{[001]}$.
This parameter is the average of individual $\left(\mathrm{A}-\mathrm{TO}_{\mathrm{i}}\right)_{[001]}$ components, where $\mathrm{T}_{\mathrm{i}}$ is a generic tetrahedral cation and the following relationships apply:

$$
\begin{gather*}
\left(\mathrm{A}-\mathrm{TO}_{\mathrm{i}}\right)_{[001]}=\left(\mathrm{A}-\mathrm{TO}_{\mathrm{i}}\right) \mathrm{n}  \tag{3}\\
\mathrm{n}=\mathrm{i} \times \mathfrak{j}  \tag{4}\\
\left(\mathrm{A}-\mathrm{T}_{\mathrm{i}}\right)_{(001)}=\sqrt{\left(\mathrm{A}-\mathrm{T}_{\mathrm{i}}\right)^{2}-\left(\mathrm{A}-\mathrm{T}_{\mathrm{i}}\right)_{001]}^{2}} \tag{5}
\end{gather*}
$$

Variance of (A-T) $)_{(001)}, \sigma(\mathrm{A}-\mathrm{T})_{(001)}$
See the definition of $\sigma A-\mathrm{O}_{\text {basal }}$, for the definition of variance, and of $(\mathrm{A}-\mathrm{T})_{(001)}$.
Distance between interlayer cation (A) and individual tetrahedral cation $\mathrm{T}_{\mathrm{M} 1}$, as defined in Figure 1, projected on (001), A-T1 ${ }_{\text {M1 }}$, (001)
See the definition of (A-T) $)_{(001)}$.
Distance between interlayer cation (A) and anionic position (O4), projected on (001), A-O4 (001)
See the definition of $(\mathrm{A}-\mathrm{T})_{(001)}$.
Distance between interlayer cation (A) and octahedral cation M1, projected on (001), A-M1 ${ }_{(001)}$

See the definition of $(A-T)_{(001)}$.
