

Elemental abundances estimated for 400°C (normalized after subtracting water)

↑ Dynamic cavity assignment↑

Conclusion

Si	Constant within error margins
Al	Inward directed mass transfer (less than at 300°C)
Fe	Slightly outward directed mass transfer (less than at 300°C)
Mg	Outward directed mass transfer
Ca	Inward directed mass transfer (less than at 300°C)

↓ No cavity assignment↓
