Preface . . . . . **ix**

Chapter 1. Structure description, interpretation and classification in structural mineralogy **1**
by **Sergey V. Krivovichev**

1. Introduction 1

2. Methods 2
   2.1. Atomic packings 2
      2.1.1. Anion packings 2
      2.1.2. Cation packings and cation arrays 3
   2.2. Coordination polyhedra 6
      2.2.1. General notes 6
      2.2.2. Cation-centred polyhedra 6
      2.2.3. Anion-centred polyhedra 13
      2.2.4. Schlegel diagrams and their use in crystal chemistry 19
   2.3. Fundamental building blocks and related concepts 22
   2.4. Networks and graphs 27
      2.4.1. General notes 27
      2.4.2. Three-dimensional nets in mineral structures 28
      2.4.3. Low-dimensional networks in mineral structures 36
      2.4.4. Isomerism of structural units in minerals and its description 37
   2.5. Tilings 39
      2.5.1. 2D tilings: anion topologies 41
      2.5.2. 3D tilings 44

3. Concepts 45
      3.1. Hierarchy 45
      3.1.1. Types of hierarchy 45
      3.1.2. Crystal structure as a nearly decomposable system 46
      3.1.3. Hierarchy and complexity 50
   3.2. Modularity 51
      3.2.1. Basic definitions 53
      3.2.2. Structure-building operators 54
      3.2.3. Homologous series 54
      3.2.4. Polytypism 57
   3.3. Complexity 57
      3.3.1. Historical notes 57
      3.3.2. Information-based measures of structural complexity 60
      3.3.3. Structural complexity of minerals: statistics and systematics 61
      3.3.4. Algorithmic complexity of mineral structures 66

4. Concluding remarks 67

Acknowledgements 67

References 67

Chapter 2. Methods of crystallography: powder X-ray diffraction. 79
by **A. Altomare, C. Cuocci, G.D. Gatta, A. Moliterni and R. Rizzi**

1. Introduction 79
2. Powder XRD technique 81
   2.1. The powder diffraction pattern 81
   2.2. Problems in the XRPD technique 86
      2.2.1. Peak overlap 86
      2.2.2. Background 87
      2.2.3. Preferred orientation 87
3. Qualitative and quantitative analysis 88
   3.1. Qualitative analysis 89
   3.2. The main traditional approaches to qualitative analysis 90
   3.3. Advances in qualitative analysis 91
   3.4. Quantitative analysis 93
   3.5. The main traditional approaches to quantitative analysis 95
   3.6. Latest advances in methodology and software for quantitative analysis . . . 99
4. Structure solution 100
   4.1. The steps of structure solution 100
   4.2. Indexing. 101
   4.3. Space-group determination. 105
   4.4. Extraction of the diffraction integrated intensities. 106
   4.5. Structure solution 107
      4.5.1. Reciprocal space (RS) methods 107
      4.5.2. Direct space (DS) methods 109
      4.5.3. Hybrid methods. 111
   4.6. The Rietveld refinement. 112
5. Powder diffraction at extreme conditions 113
   5.1. High-temperature elastic behaviour of crystalline materials 114
   5.2. High-pressure elastic behaviour of crystalline materials 116
   5.3. *P-V* and *P-T-V* equations of state 117
   5.4. Structure evolution at high pressure and temperature. 119
   5.5. Devices for *in situ* experiments under extreme conditions 121
   5.6. X-ray *vs.* neutron powder diffraction under extreme conditions 123
   5.7. A case study: high-pressure and high-temperature behaviour of the zeolite $CsAlSiO_4$ 124
6. Conclusions 127

Acknowledgments 127

References 127

Chapter 3. Electron crystallography 139
by **L. Palatinus, M. Gemmi and M. Klementová**

1. Introduction 139
2. The scope and applications of electron crystallography 140

3. Overview of experimental techniques 141
3.1. Imaging techniques 143
3.1.1. Amplitude contrast 143
3.1.2. Phase contrast 145
3.2. Electron diffraction techniques 147
3.2.1. Selected area electron diffraction (SAED) 147
3.2.2. Micro- and nanodiffraction 148
3.2.3. Convergent beam electron diffraction (CBED) 149
3.2.4. Precession electron diffraction (PED) 151
3.2.5. Electron diffraction tomography (EDT)[1] 154
3.2.6. Phase and orientation mapping 156
3.3. Spectroscopic techniques 157
3.3.1. Energy dispersive X-ray spectroscopy (EDX) 157
3.3.2. Electron energy-loss spectroscopy (EELS) and energy-filtered TEM (EFTEM) 158
4. Applications 158
4.1. Phase identification 158
4.2. Determination of the crystal symmetry 161
4.2.1. Determination of the Laue class and extinction symbol by diffraction tomography 161
4.2.2. Determination of the Laue class and extinction symbol by the collection of oriented spot diffraction patterns 162
4.2.3. Space-group determination by CBED 163
4.3. *Ab initio* structure solution 165
4.3.1. EDT on nanocrystalline minerals: the vaterite crystal structure 166
4.3.2. EDT in experimental petrology: the HAPY phase 167
4.3.3. EDT on new minerals: the sarrabusite case 168
4.3.4. EDT on finely intergrown polytypes: the charoite case 169
4.4. Structure refinement 170
4.4.1. Kinematical structure refinement 171
4.4.2. Dynamical structure refinement 172
5. Conclusion 175
References 176

Chapter 4. Environmental mineralogical applications of total scattering and pair distribution function analysis 183
by **F. M. Michel**

1. Introduction 183
2. Effects of size and structural disorder on diffraction data 185
3. Overview of total scattering methodology 187
4. The pair distribution function 189
5. Extracting information from the PDF: Examples from selected studies of environmental minerals 191
5.1. Direct structural information from the PDF 191

5.1.1. Peak position, intensity, width and shape 191
5.1.2. Peak attenuation and PDF truncation 193
5.2. Real-space fitting with periodic models 195
5.2.1. Nanosized mackinawite 196
5.2.2. Ferrihydrite 198
5.2.3. Manganese oxide 200
5.3. Combined real-space and reciprocal-space analysis 201
5.3.1. Schwertmannite 201
5.3.2. Quartz/amorphous SiO_2 mixture 203
5.4. Reverse Monte Carlo and whole nanoparticle simulation 204
6. Summary and outlook 207
Acknowledgements 208
References 208

Chapter 5. Aperiodic mineral structures 213
by **L. Bindi and G. Chapuis**

1. Is the law of rational indices of general validity? Background information from the history of crystallography 213
2. An elementary introduction to the concept of superspace and redefinition of a crystal 217
3. Symmetry in superspace 220
4. Measurements and resolution of modulated structures from diffraction data . . . 222
5. A reinterpretation of the law of rational indices and occurrences of aperiodic structures 225
6. Naturally occurring aperiodic structures 227
7. Naturally occurring incommensurately modulated structures 228
7.1. (3+1)D incommensurately modulated structure: the cases of calaverite and natrite 228
7.2. (3+2)D incommensurately modulated structure: the cases of melilite and fresnoite 232
8. Naturally occurring composite modulated structures 235
8.1. The minerals of the pearceite–polybasite group 235
8.2. The cylindrite-type minerals 239
9. Naturally occurring quasicrystals 241
9.1. The case of icosahedrite 241
10. Conclusions 248
Acknowledgements 248
