

Highly Siderophile and Strongly Chalcophile Elements

*in High-Temperature Geochemistry
and Cosmochemistry*

81 *Reviews in Mineralogy and Geochemistry* 81

TABLE OF CONTENTS

1 Experimental Results on Fractionation of the Highly Siderophile Elements (HSE) at Variable Pressures and Temperatures during Planetary and Magmatic Differentiation

James M. Brenan, Neil R. Bennett, Zoltan Zajacz

INTRODUCTION AND SCOPE.....	1
SOLID METAL–LIQUID METAL PARTITIONING.....	2
EXPERIMENTAL APPROACH TO	
SOLID METAL–LIQUID METAL PARTITIONING ($D^{\text{SM/LM}}$).....	3
HSE SOLUBILITY EXPERIMENTS:	
IMPLICATIONS FOR METAL–SILICATE PARTITIONING.....	13
CALCULATING THE METAL–SILICATE MELT	
PARTITION COEFFICIENT FROM SOLUBILITY DATA.....	14
Controls on the metal–silicate partition coefficient.....	15
Metal inclusions in experiments and the analysis of contaminated phases.....	16
Possible mechanisms of metal inclusion formation.....	17
Experimental methods to measure HSE solubility and metal–silicate partitioning....	21
Summary of experimental data.....	22
Application of results to core formation.....	33
SILICATE AND OXIDE CONTROL ON HSE FRACTIONATION.....	35
Experimental approach.....	35
Spinel–melt partitioning of HSEs.....	36
Silicate mineral–melt partitioning of HSEs.....	38
Origin of the variation in partitioning.....	40
Local PGM saturation during chromite growth.....	43
MAGMATIC SULFIDE AND ASSOCIATED PHASES.....	44
Experimental approach.....	45
MSS–sulfide melt partitioning.....	48
MSS–ISS–sulfide melt partitioning.....	51

Sulfide melt–silicate melt and MSS–silicate melt partitioning	51
Role of the chalcogens (Se, Te, As, Bi, Sb).....	61
SILICATE MELT–AQUEOUS LIQUID–VAPOR PARTITIONING	63
Theoretical considerations.....	64
Experimental methods.....	65
The volatile/melt partitioning of Au.....	68
The volatile/melt partitioning of PPGE.....	71
The volatile/melt partitioning of IPGE and Re.....	72
CONCLUDING REMARKS.....	73
ACKNOWLEDGMENTS.....	73
REFERENCES	74

2 Analytical Methods for the Highly Siderophile Elements

Thomas Meisel, Mary F. Horan

INTRODUCTION	89
DATA QUALITY CONSIDERATIONS FOR THE HSE.....	90
Sample heterogeneity and reproducibility.	90
MEASUREMENT PROCEDURES	92
Chemical separation of HSE	95
REFERENCE MATERIALS FOR HSE ANALYSIS.....	97
APPENDIX.....	100
REFERENCES	102

3 Nucleosynthetic Isotope Variations of Siderophile and Chalcophile Elements in the Solar System

Tetsuya Yokoyama, Richard J. Walker

INTRODUCTION	107
ORIGIN OF ELEMENTS: STELLAR NUCLEOSYNTHESIS	109
Production of elements from He to Fe via hydrogen to silicon burning	109
PRESOLAR GRAINS	117
Types of presolar grains and their origin.....	119
ISOTOPE ANOMALIES OF SIDEROPHILE AND CHALCOPHILE ELEMENTS IN BULK METEORITES.....	126
Isotope anomalies of siderophile elements in bulk meteorites.....	128
Isotope anomalies of chalcophile elements in bulk meteorites	138
INTERNAL ISOTOPE ANOMALIES PRESENT IN CHONDRITES	140
CAIs.....	140
Acid leachates and residues.....	142
Isotopic constraints on the s-process nucleosynthetic component.	148
ORIGIN OF PLANETARY SCALE ISOTOPE ANOMALIES IN METEORITES.....	150
CONCLUDING REMARKS.....	152
ACKNOWLEDGMENTS.....	152
REFERENCES	153

4

Highly Siderophile Elements in Earth, Mars, the Moon, and Asteroids

James M.D. Day, Alan D. Brandon, Richard J. Walker

INTRODUCTION	161
MOTIVATION FOR STUDY AND BEHAVIOR OF THE HSE IN PLANETARY MATERIALS	163
METHODS APPLIED TO INVESTIGATING SIDEROPHILE ELEMENTS IN PLANETARY MATERIALS	164
HSE ABUNDANCES	164
The rhenium–osmium, platinum–osmium and palladium–silver isotope systems....	166
Standardization in planetary studies	168
Metal-sulfide–silicate modeling in chondritic systems	168
Partial melt modeling of planetary mantles	172
“Pristinity” of crustal and mantle samples	174
Estimation of planetary mantle composition	175
What do chondritic or nearly/broadly chondritic actually mean?	179
PLANETARY MATERIALS	181
Early Solar System materials.....	181
Fragments of planetary cores and/or metal-rich melt pools	187
Primitive achondrite meteorites.....	191
Meteorites from differentiated asteroids.....	195
Mars.....	198
The Moon	201
Terrestrial mantle composition	209
Secondary alteration effects.....	210
PLANETARY FORMATION PROCESSES	212
Initial conditions and homogeneity of starting materials	212
Partial melting and partitioning of the HSE	214
Core crystallization.....	216
‘Late-accretion’	216
Alternative hypotheses for the abundances of the HSE in planetary mantles	218
Magmatic processes.....	220
Later impacts into planetary crusts.....	221
COMPARATIVE PLANETOLOGY AND IMPLICATIONS FOR TERRESTRIAL FORMATION	222
FUTURE DIRECTIONS	226
ACKNOWLEDGEMENTS	227
REFERENCES	227

5

Distribution and Processing of Highly Siderophile Elements in Cratonic Mantle Lithosphere

Sonja Aulbach, James E. Mungall, D. Graham Pearson

INTRODUCTION	239
THE CRATONIC MANTLE SAMPLE: PECULIARITIES, OPPORTUNITIES AND PITFALLS	240

DATABASE	244
MINERALOGY AND HSE HOSTS	
IN CRATONIC MANTLE PERIDOTITES	248
ANALYTICAL TECHNIQUES FOR CRATONIC MANTLE PERIDOTITES	250
Whole rocks and mineral separates	250
Single-grain techniques	252
UTILIZATION OF THE RE–OS ISOTOPE SYSTEM	
IN CRATONIC MANTLE STUDIES.....	253
EFFECT OF MELT DEPLETION DURING CRATONIC LITHOSPHERE	
STABILIZATION ON SULFUR AND HSE SYSTEMATICS	255
Sulfur and the persistence of sulfides	255
Alloy saturation	256
Chalcogens	262
HSE PROCESSING DURING MANTLE METASOMATISM.....	262
Modification during intraplate mantle metasomatism.....	263
Modification during craton margin processes—subduction.....	269
MODELLING OF PRIMARY VS. SECONDARY HSE SIGNATURES	
IN CRATONIC MANTLE	273
HSE Concentrations of the Archean convecting mantle (ACM).....	273
Modelling Rationale	275
Effects of partial melt extraction on HSE based on modelling	278
Post-core formation, sluggish downward mixing of a late veneer	285
SUMMARY	286
ACKNOWLEDGMENTS.....	288
REFERENCES	288

Highly Siderophile Element and ^{187}Os Signatures in Non-cratonic Basalt-hosted Peridotite Xenoliths: Unravelling the Origin and Evolution of the Post-Archean Lithospheric Mantle

Ambre Luguet, Laurie Reisberg

INTRODUCTION	305
CONSTRAINING THE HSE AND $^{187}\text{Os}/^{188}\text{Os}$ ISOTOPIC COMPOSITION OF THE PRIMITIVE BULK SILICATE EARTH	306
PETROLOGY AND LOCATION OF NON-CRATONIC PERIDOTITE XENOLITHS	308
A BRIEF REVIEW OF HSE AND Os ISOTOPE ANALYTICAL METHODS AND HSE NORMALIZATION VALUES	309
HOST MINERALS OF HIGHLY SIDEROPHILE ELEMENTS IN NON-CRATONIC PERIDOTITE XENOLITHS	311
Nature of the host minerals.....	311
Petrography of the base metal sulfides	312
Origin of the base metal sulfides and platinum group minerals	315
HIGHLY SIDEROPHILE ELEMENTS AND $^{187}\text{Os}/^{188}\text{Os}$ RESULTS FROM NON-CRATONIC PERIDOTITE XENOLITHS	316
Summary of results from whole-rock studies.....	317

Summary of results from base metal sulfides and other mineral phases	321
Reconciling $^{187}\text{Os}/^{188}\text{Os}$ results from whole-rock and base metal sulfide analyses ...	326
THE LIFE OF A XENOLITH, AS RECORDED IN HSE- AND Os-ISOTOPE	
SYSTEMATICS	327
The HSE and ^{187}Os composition of the Primitive Upper Mantle	328
Whole-rock observations on samples representing melting residues	330
Mineralogical control of HSE fractionation during partial melting	332
Ancient melt-extraction events recorded by $^{187}\text{Os}/^{188}\text{Os}$ systematics.....	335
Post-melting petrological history	336
Syn- to post-eruptive processes	350
CHRONOLOGICAL INTERPRETATION OF OS-ISOTOPIC DATA AND TECTONIC	
IMPLICATIONS	351
Obtaining age information from Os isotopes of whole rocks.....	351
Obtaining age information from Os isotopes of base metal sulfides.....	354
Tectonic interpretation of Os model ages	355
CONCLUSIONS.....	356
ACKNOWLEDGEMENTS	358
REFERENCES	358

7 Re–Pt–Os Isotopic and Highly Siderophile Element Behavior in Oceanic and Continental Mantle Tectonites

Harry Becker, Christopher W. Dale

INTRODUCTION	369
BREVIEW OF CONCEPTS, TERMINOLOGY, AND ANALYTICAL CAVEATS	370
Re–Pt–Os parameters	370
Normalization of concentration data	370
Precision and accuracy of concentration data and analytical issues.....	371
HIGHLY SIDEROPHILE ELEMENTS IN MANTLE TECTONITES FROM	
DIFFERENT GEODYNAMIC SETTINGS	371
Summary of mantle tectonites and their geodynamic settings	371
HSE IN ABYSSAL PERIDOTITES FROM SPREADING OCEANIC LITHOSPHERE ..	374
HSE in mantle tectonites from continental extensional domains and	
continent–ocean transitions	380
HSE in ophiolites that formed at fast spreading ridges with little or no influence	
from subduction processes	386
High-temperature orogenic peridotites from convergent plate margin settings	388
Highly siderophile elements in peridotites and melt-reacted lithologies of	
ophiolites influenced by convergent plate margin magmatism	392
Highly siderophile elements in the mantle sections of ophiolites of uncertain	
origin	398
DISCUSSION	399
Influence of low-temperature alteration processes on the HSE in bulk rocks	
and minerals.....	399
The influence of melt infiltration and partial melting on HSE abundances in	
mantle tectonites	402
Summary—Mantle melting and mantle–magma interaction—different sides	
of the same coin.....	416
Os isotopic heterogeneity in the mantle	418

The role of recycled oceanic lithosphere in producing HSE and Os isotope signatures in magmas	423
The relationship between abyssal peridotites and MORB: an osmium isotope perspective	426
Interpretation of Re–Os model ages	427
ACKNOWLEDGMENTS.....	429

8 Chalcophile and Siderophile Elements in Mantle Rocks: Trace Elements Controlled By Trace Minerals

Jean-Pierre Lorand, Ambre Luguet

INTRODUCTION	441
BACKGROUND.....	442
Sulfides in the upper mantle and mantle rocks	443
Abundance and phase control on chalcophile and siderophile elements in the fertile upper mantle.....	446
Partial melting of the mantle: a BMS-removing and PGM producing petrogenetic process.	458
Chalcophile/siderophile element systematics in pyroxenites	466
Low-pressure BMS dissolution in regional-scale open system melting of the sub-continental lithospheric mantle.....	469
BMS precipitation associated with magma percolation/metasomatism.....	472
Platinum-group minerals and magmatic percolation of the lithospheric mantle.....	475
CONCLUDING REMARKS.....	480
ACKNOWLEDGMENTS.....	481
REFERENCES	481

9 Petrogenesis of the Platinum-Group Minerals

Brian O'Driscoll, José María González-Jiménez

INTRODUCTION	489
PHASE RELATIONS AND ORIGIN OF THE PGM	490
Chemical properties of the PGM.....	490
Extraterrestrial occurrences of the PGM	492
Origin of the terrestrial PGM: Mantle melting, metasomatism, and metal transfer..	495
PGM IN LAYERED MAFIC–ULTRAMAFIC INTRUSIONS	498
Chromitite-hosted layered intrusion PGM	498
Non-chromitite-hosted PGM in layered intrusions	507
PGM IN OPHIOLITES.....	516
PGM in ophiolite peridotites	516
PGM in ophiolite chromitites.....	518
PGM in sulfide-rich ophiolite lithologies	530
PGM IN PERIDOTITES OF THE	
SUBCONTINENTAL LITHOSPHERIC MANTLE	531
Subcontinental lithospheric mantle peridotite massifs	531
SCLM peridotite xenoliths	532

PGM IN CONCENTRICALLY ZONED	
URALIAN–ALASKAN–ALDAN-TYPE COMPLEXES.....	533
PGM in dunite, pyroxenite and gabbro	534
Chromitite-hosted PGM in CUAAC	535
PGM and sulfide mineralization in CUAAC	539
PGM IN NI-SULFIDE DEPOSITS	542
Komatiite-associations.....	542
Magmatic Ni-($\pm$ Cu- $\pm$ PGE)-sulfide deposits in non-komatiitic rocks	544
EXAMPLES OF UNCONVENTIONAL PGM OCCURRENCES	549
Kimberlite- and Cu-porphyry-hosted PGM.....	549
OUTLOOK AND FUTURE WORK	551
Assessing the mineralogical and textural complexity of PGM assemblages	551
Constraints on quantifying the distribution and grain size of PGM.....	552
Advancing our understanding of the link between PGM assemblage and	
PGE geochemistry	553
ACKNOWLEDGEMENTS	554
REFERENCES	554
APPENDIX.....	570
PGM in placers associated with ophiolite complexes	570
PGM mineralization in CUAAC placer deposits.....	573
REFERENCES	576

Mantle Sulfides and their Role in Re–Os and Pb Isotope Geochronology

Jason Harvey, Jessica M. Warren, Steven B. Shirey

INTRODUCTION	579
BACKGROUND.....	581
ANALYTICAL METHODS AND PRACTICAL ASPECTS	
OF SAMPLE PREPARATION	585
BASE-METAL SULFIDE OCCURRENCE, MAJOR ELEMENT GEOCHEMISTRY	
AND PETROLOGY.....	589
Peridotite-hosted sulfides	592
Pyroxenite-hosted sulfides.....	603
Diamond-hosted sulfides	606
Re–Os–Pb MASS BALANCE IN ULTRAMAFIC SAMPLES	610
Osmium mass balance	610
Rhenium mass balance.	613
Lead mass balance.....	614
GEOCHRONOLOGICAL METHODS, MODEL AGES,	
AND POTENTIAL PITFALLS.	615
Sulfide Re–Os isochrons, T_{MA} , T_{RD} , and γOs	615
Potential pitfalls with sulfide geochronology.	620
THE UTILITY OF Re–Os AND Pb ISOTOPE GEOCHRONOLOGY	626
Dating the formation of diamonds.....	626
Diamond formation through time	628
The age of the continental lithospheric mantle and the assembly of its domains	628
The relationship between the age of the SCLM and the overlying crust	630

The inherent heterogeneity within the oceanic mantle.....	632
CONCLUDING REMARKS AND FUTURE DIRECTIONS	635
ACKNOWLEDGMENTS.....	635
REFERENCES	635

11 Highly Siderophile Element and Os Isotope Systematics of Volcanic Rocks at Divergent and Convergent Plate Boundaries and in Intraplate Settings

*Abdelmouhcine Gannoun, Kevin W. Burton, James M.D. Day,
Jason Harvey, Pierre Schiano, Ian Parkinson*

INTRODUCTION	652
HIGHLY SIDEROPHILE ELEMENT DISTRIBUTION AND BEHAVIOR	
IN THE UPPER MANTLE.....	654
Core formation and the late accretion of impactor material.....	654
Highly siderophile elements in mantle minerals	655
Highly siderophile element behavior accompanying fractional crystallization	660
THE ¹⁸⁷ Re– ¹⁸⁷ Os ISOTOPE SYSTEM AND THE FORMATION OF	
MID-OCEAN RIDGE BASALT (MORB)	661
Introduction	661
Analytical techniques	662
Rhenium–Osmium elemental variations in MORB glass	663
The ¹⁸⁷ Os/ ¹⁸⁸ Os isotope variations in MORB glass.....	665
Analytical issues associated with MORB.....	668
SULFIDES IN MID-OCEAN RIDGE BASALTS	677
Petrology and chemistry	677
¹⁸⁷ Re– ¹⁸⁷ Os behavior in MORB sulfide.....	680
The ¹⁸⁷ Os/ ¹⁸⁸ Os composition of the MORB mantle source.....	682
LOWER OCEANIC CRUST	683
Assimilation of gabbroic lower crust.....	686
HSE ABUNDANCES AND Re–Os ISOTOPE SYSTEMATICS	
OF INTRAPLATE VOLCANISM.....	686
Mantle melting processes	687
Osmium isotopes as tracers of hotspot sources	688
Crustal and lithospheric mantle assimilation/contamination.....	691
The origin of Continental Flood Basalts (CFB) and	
Large Igneous Provinces (LIP).....	693
Continental intraplate alkaline volcanism	696
Processes affecting the HSE compositions of sub-aerial volcanism	699
HIGHLY SIDEROPHILE ELEMENT SYSTEMATICS OF ARCS	700
HSE and ¹⁸⁷ Os/ ¹⁸⁸ Os in arc lavas.....	700
HSE and ¹⁸⁷ Os/ ¹⁸⁸ Os in arc xenoliths	704
Radiogenic Os from slab components or from crustal contamination	705

Highly Siderophile and Strongly Chalcophile Elements in Magmatic Ore Deposits

Sarah-Jane Barnes, Edward M. Ripley

INTRODUCTION	725
CLASSIFICATION OF THE DEPOSITS	731
Reef or stratiform deposits	731
Contact deposits	731
Ni-sulfide deposits	732
MINERALS HOSTING THE PLATINUM-GROUP ELEMENTS	734
Base metal sulfides	734
Platinum-group minerals	737
Chromite	738
Mass Balance	738
GEOCHEMISTRY	739
Introduction	739
Normalization to mantle or chondrite?	740
Recalculation to 100% Sulfides or whole rock	740
Other chalcophile elements	742
INTERPRETATION	743
Composition of the silicate melt	743
Saturation of the magma in a sulfide liquid	746
Upgrading of the Sulfides	747
Crystallization of a sulfide liquid	752
Late magmatic fluids	754
Subsolidus events	755
UTILIZATION OF THE Re–Os ISOTOPE SYSTEM IN STUDIES OF MAGMATIC	
Ni–Cu–PGE ORE GENESIS	756
Background	756
The “ <i>R</i> -factor” and its application to Re–Os isotopes	759
Examples of the application of the Re–Os isotope system	
to magmatic ore deposits	759
CONCLUSIONS	765
ACKNOWLEDGMENTS	766
