

## Supplemental Material

**FIGURE S1.** Cross section of the 14/8 cell assembly for high pressure ultrasonic measurements in this study (WC anvil is not in scale).

**Figure S2.** Selected analyzed X-ray diffraction pattern using Le Bail method. Tickmarks below the spectrum are the calculated diffraction peak positions for Opx ( $Pbca$ ) or HPCpx ( $C2/c$ ) and NaCl (pressure medium). a) 0 GPa room temperature: Opx ( $Pbca$ ) + NaCl; b) 13.5 GPa 673 K: Opx ( $Pbca$ ) + NaCl; c) 11.9 GPa 873 K: HPCpx ( $C2/c$ ) + NaCl.
