Reviews in Mineralogy and Reviews in Mineralogy and Geochemistry

Reviews in Mineralogy and, later, *Reviews in Mineralogy and Geochemistry* are two series of multi-authored, soft-bound volumes containing concise reviews of the literature and advances in theoretical and/or applied mineralogy, crystallography, petrology, and geochemistry. The content of each volume consists of fully developed text which can be used for self-study, research, or as a text-book for graduate-level courses. *Reviews* volumes are typically produced in conjunction with a short course, but can also be published without a short course. The series is jointly published by the [Mineralogical Society of America](#) (MSA) and the [Geochemical Society](#).

Reviews volumes are available in hard copy from the MSA Bookstore, by subscription for online access, and electronically, as pdfs, at this link: www.minpubs.org.
