

**The effect of anhydrous composition on water solubility in granitic melts**, by Harald Behrens and Nicole Jantos (v. 86, p. 14–20, 2001).

On page 17 at the beginning of the last paragraph it is noted that in Equation 1 concentrations of atoms in mol/g are given. However, in the calculation concentrations of oxide components in mol/g were used. As a consequence, the calculated value of (MCLNK-A)/O is not identical with the mole percentage of non-bridging O atoms divided by total oxygen for peralkaline compositions.
